

Observatoire Agricole de la Biodiversité

The farmland biodiversity observatory (FBO)

Network of Citizen sciences French national Museum of natural History Common species Biodiversity and global change

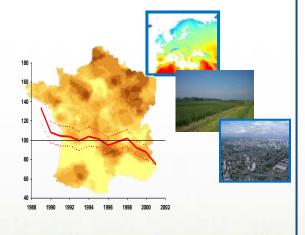

3 objectives:

Scientific

The production of large-scale spatiotemporal data makes it possible to conduct scientific research.

Pedagogical

 participants learn to understand ecosystems by observing nature

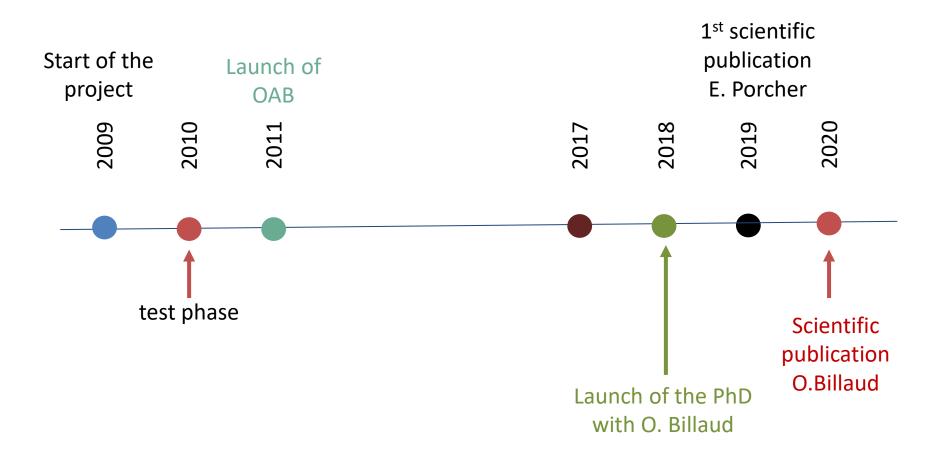

Political

➤ The production of biodiversity indicators can support policy decisions (developments, etc.).

This project started to respond to a proven lack of indicators for monitoring the state of biodiversity in agriculture

Governance

Scientific coordination =
French national Museum of natural History with University Rennes 1

 Support for national animation = permanent assembly of chambers of agriculture

follow-up in humanities and social sciences

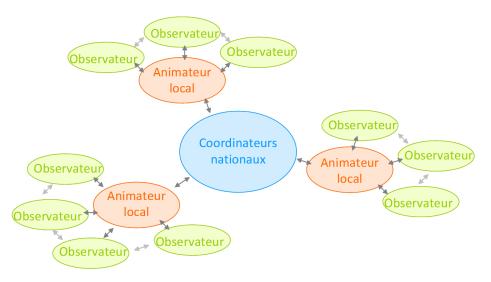

OAB: a network

The national animation interacts with various local structures that supports farmers on the field

- National coordination
- Local animation
- Observers

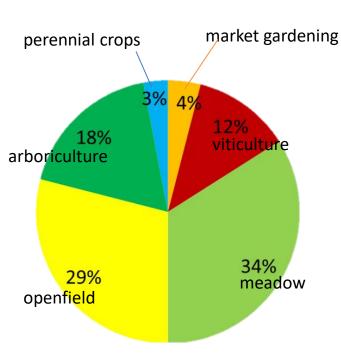

Participation (agricultural plots)

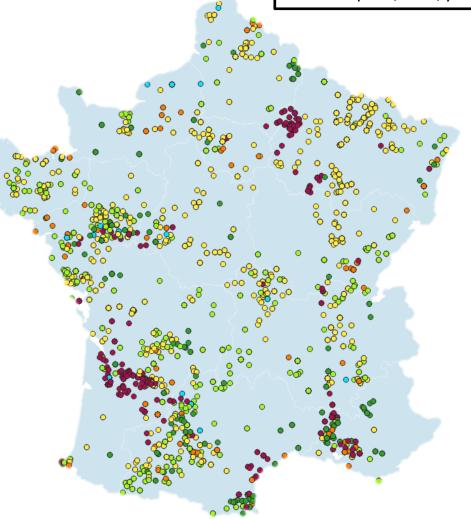

- 1500 farms
- 2500 plots

Total:

• 8000 plots/farm/year

Distribution of participations by type of crop

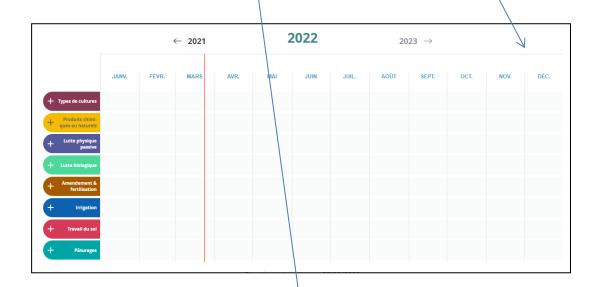

Participation tools

field guide

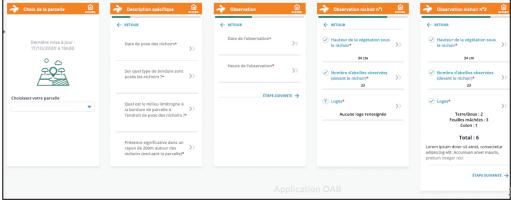

• input interface for agricultural practices

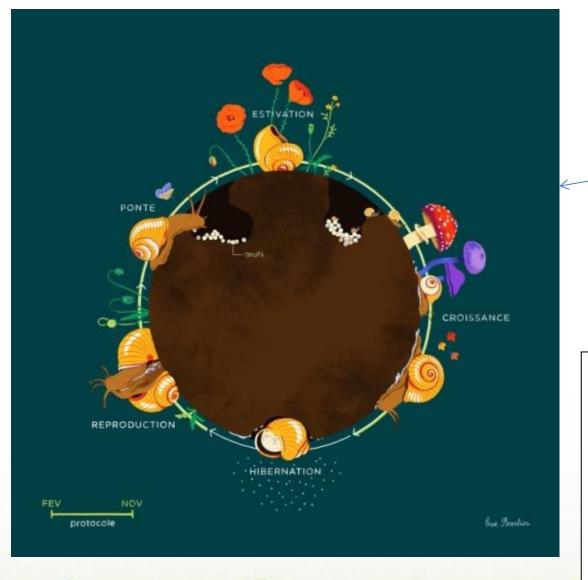

Awareness tools

- life cycle
- identification keys
- species guide
- webinar

Webinaire Papillons de jour

En lien avec le PNA papillons de jour, un webinaire présenté par Gaëlle Sobczyk-Moran. Retrouvez ici le PowerPoint de ce webinaire, et la vidéo de l'intervention de Gaëlle Zobcyk-Morand.

Results

First step annual report

Second step research

Results: humanities and social sciences

L'observatoire agricole de la biodiversité

Vers un ré-ancrage des pratiques dans leur milieu

A participatory agricultural biodiversity watch. Anchoring farming practices in their environment

Suzie Deschamps et Élise Demeulenaere

p. 109-126

https://doi.org/10.4000/etudesrurales.10276

Extract of abstract:

- « re-establish experiences of nature ».
- « reconfiguration of professional relations, especially between farmers and extension services."
- « re-anchor farming practices in the environment. »

Suzie Deschamps et Élise Demeulenaere 2015

Obstacles

Great turn over between participants (

Long data entry time

- Feedback to the participants
- Only one full-time person on the project \nearrow

Not a diagnostic tool for biodiversity

A LOT of data needed to have significant results

Perspectives

- Automatic feedback $\stackrel{\otimes}{\sim}$
- Regular webinar (A)
- More networks interaction

New protocols

New tool

Thank you for your attention!
